

Total Recall delivers an
AFFORDABLE and
PROFESSIONAL
VoIP, ISDN and ANALOG

CALL RECORDER

Ideal for all telecommunications
and 2-way radio logging
and recording requirements.

Have you previously investigated call recording options and found the cost prohibitive?

Total Recall is the total solution.

TOTAL SOLUTION

- In an increasingly security conscious, results driven and litigious world, communications recording is vital to meeting your legal, management and duty of care requirements.
- Total Recall is the compact, self contained and cost effective solution to your problem, providing secure recording, storage and playback of mission-critical telephone and radio communications.
- Total Recall will simultaneously and securely record combinations of VoIP, ISDN and Analog communications, offering a robust solution for every business environment.
- All Total Recall servers feature the Linux operating system, providing your business with the highest degree of security, stability, ease of connectivity and operation.

FEATURE PACKED

Total Control

- Total Recall gives you full control over which calls are recorded.
- Call recordings can be controlled from your phone or license free software running on your PC.
- Access to recordings can be restricted.

Extensive Archiving Options

- Backup calls to standard DVD media for an inexpensive portable archiving solution, or transfer the recordings to a network FTP server.

Large Capacity Database

- Total Recall's internal database can store up to half a million calls, or 20,000 hours of recordings.

Reliable

- Utilisation of mirrored hard drives and hot swap power supplies provides an extremely high level of availability.

CTI Integration

- Ask us about optional CTI integration options to capture extension information from the PBX.

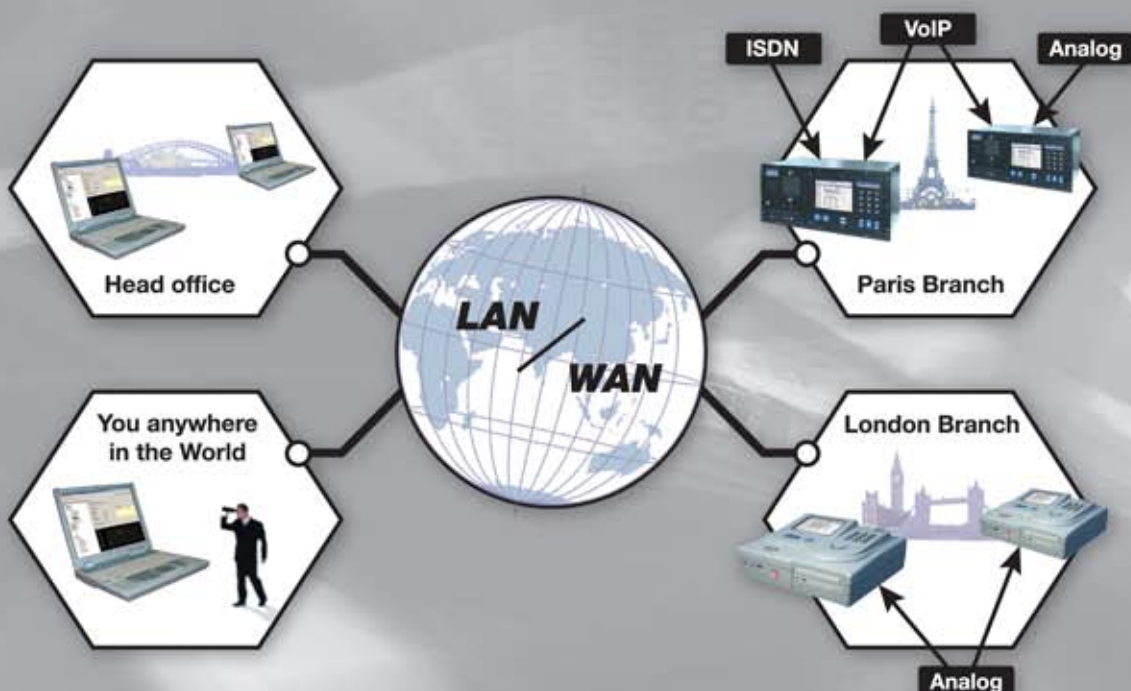

Flexible and Comprehensive

- Fast and responsive on-board search engine.
- Live monitoring function to enable real-time monitoring of calls or broadcasts.
- Extensive reporting facilities (print or export to spreadsheet).
- API to gain access to call information in real time.

Remote Access

- Total Recall comes complete with powerful *Remote Manager* software to allow calls to be replayed and monitored on any Windows PC.
- Export recordings in .WAV or .MP3 formats for email or network transfer.
- 'Drag and Drop' calls from Total Recall to your PC for incident investigation.

THE DIFFERENCE

Affordable

- No hidden costs – while other recorder companies charge for every additional feature, Total Recall provides fully-featured recorders at an affordable price.

Full Recording Solution

- Total Recall will record any combination of VoIP, ISDN or other line level audio source, including telephones, 2-way radios, intercoms, microphones and more, offering you a single-server total recording solution.

Simple to Use

- Our straightforward GUI offers intuitive navigation, making the operation and configuration of Total Recall easy for even non-technical users. Intelligent call database fields make finding the exact calls almost effortless – less time searching for calls means more time spent on core activities.

Scaleable

- Connect units over a LAN/WAN/VPN or dialup connection to easily search, monitor and manage multiple sites with the included *Remote Manager* software.
- Total Recall Server edition offers high-end channel capacities, with minimal footprints reducing your investment in rack space.

Secure

- Multiple security levels provide full control over call access.
- Tamper-proof recordings.
- Audit trails of all user activity.
- Not susceptible to Windows targeted viruses, worms and trojans.
